

**TEDA Annual Conference**  
The Texas Educational Diagnosticians' Association  
is CELEBRATING IT!  
Mon, Dec. 9 - Tues, Dec. 10, 2019  
Waco, Texas

**Keynote Speakers**  
Dr. Steven Feifer: Dyslexia, Dysgraphia, Dyscalculia...Dysaster!  
How Educators Can Navigate These Disorders  
Dr. Steven Hardy-Baker: Maximizing thinking without speaking...much

## Dyslexia, Dysgraphia, Dyscalculia...Dysaster! How Educators Can Navigate These Disorders

A lateral view of the brain showing the lobes of the cerebral cortex in the left cerebral hemisphere

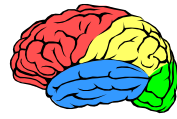

The lobes of the cerebral cortex in the left cerebral hemisphere, shown in lateral view

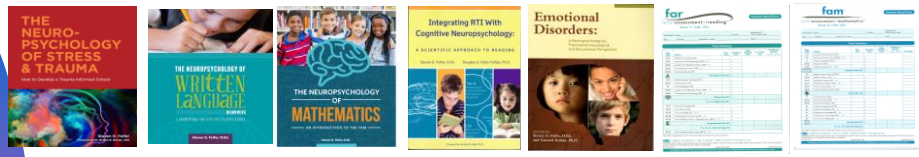

© 2011 Pearson Education, Inc.

**Steven G. Feifer, D.Ed, ABSNP**  
*TEDA Annual Conference*  
*December 9<sup>th</sup>, 2019*

1

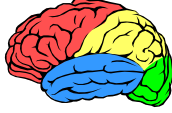

## Dr. Feifer's Journey 1993 - ?

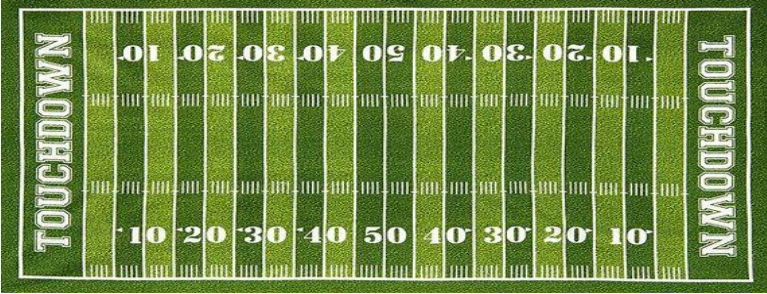

- School psychologist 20+ years
- Diplomate in school neuropsychology
- 2008 Maryland School Psychologist of the Year
- 2009 National School Psychologist of the Year
- Author: **8 books** on learning and emotional disorders
- Test Author: **FAR & FAM** (FAW coming soon)
- Currently in private practice at Monocacy Neurodevelopmental Center in Maryland.
- ABSNP Diplomate and Faculty Instructor

2

## Where is your finish line?

**IQ SCORE**  
(1990's)

**Qualification**  
(Administrative  
Psychologist)

**Interventions**  
(Clinician)

3

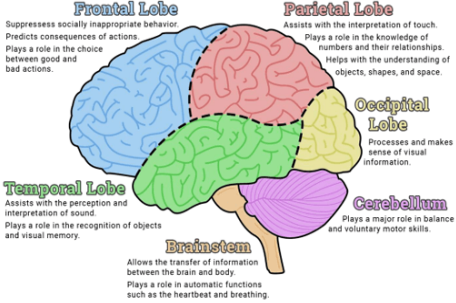

3

## School Neuropsychology

➤ **Neuropsychology:** An analysis of learning and behavior which examines *brain-behavior* relationships. The underlying assumption is that the brain is the seat of **ALL** behavior; therefore, knowledge of cerebral organization should be the key to unlocking the mystery behind most cognitive tasks.

**The Human Brain**

**Frontal Lobe**  
Suppresses socially inappropriate behavior  
Predicts consequences of actions  
Plays a role in the choice between good and bad actions.

**Parietal Lobe**  
Assists with the interpretation of touch.  
Plays a role in the knowledge of numbers and their relationships.  
Helps with the understanding of objects, shapes, and space.

**Temporal Lobe**  
Assists with the perception and interpretation of sound.  
Plays a role in the recognition of objects and visual memory.

**Occipital Lobe**  
Processes and makes sense of visual information.

**Brainstem**  
Allows the transfer of information between the brain and body.  
Plays a role in automatic functions such as the heartbeat and breathing.

**Cerebellum**  
Plays a major role in balance and voluntary motor skills.

## Dispelling Neuromyths

Macdonald, K., Germine, L., Anderson, A., Christodoulou, J., McGrath, L. (2017).  
 Dispelling the Myth: Training in Education or Neuroscience Decreases but Does Not Eliminate Beliefs in Neuromyths. *Frontiers in Psychology*, 8, 1314.

1. VAK Learning Styles
2. Dyslexia and Reversals
3. Mozart Effect
4. We use just 10% of our Brains
5. Sugar causes ADHD
6. Right vs Left Brain Learners

General Public.....(m=68%)  
 Educators ..... (m=56%)  
 High Neuroscience Exposure...(m=46%)

5

5

## Defining Dyslexia

- *“Dyslexia is characterized by difficulties with **accurate** and / or **fluent** word recognition and by poor spelling and decoding abilities. These difficulties typically result from a deficit in the phonological component of language that is often unexpected in relation to other cognitive abilities and the provision of effective classroom instruction. Secondary consequences may include problems in reading comprehension and reduced reading experience that can impede growth of vocabulary and background knowledge.”*

- International Dyslexia Association

6

6

## Four Universal Truths of Reading

**1. In all word languages studied to date, children with developmental reading disorders (dyslexia) primarily have difficulties in both recognizing and manipulating phonological units at all linguistic levels (Goswami, 2007).**

### Lowest Incidence:

Slovakia	1-2%
Italy	1-5%
Czech Republic	2-3%
Britain	4%
Poland	4%
Belgium	5%
Greece	5%
Japan	6%

### Highest Incidence:

China	5-8%
United States	5-10%
Russia	10%
Israel	10%
Finland	10%
Nigeria	11%
Australia	16%
India	20%

(Smith, Everatt, & Salter, 2004)

7

7

## Four Universal Truths of Reading

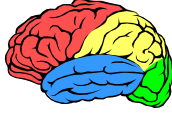

**2. The English language *is not* a purely phonological!**

- 1 letter grapheme: c a t. The sounds /k/ is represented by the letter 'c'.
- 2 letter grapheme: l e a f. The sound /ee/ is represented by by the letters 'e a'.
- 3 letter grapheme: n i g h t. The sound /ie/ is represented by the letters 'i g h'.
- 4 letter grapheme: th r ough. The sound /oo/ is represented by the letters 'o u g h'

- The English language includes over **1,100** ways of representing **44 sounds** using a series of different letter combinations (Uhry & Clark, 2005). In Italian there is no such ambiguity as just **33** graphemes are sufficient to represent the **25 phonemes**.
- Therefore, 25% of words are phonologically irregular (i.e. "debt", "yacht", "onion", etc..) or have one spelling but multiple meanings -*homonyms*- (i.e. "tear", "bass", "wind", etc.)
- **Summary:** We need to develop orthography!!

8

8

## The Problem with English Orthography?

IF THE GH SOUND IN ENOUGH<sup>H</sup> IS PRONOUNCED "F"  
& THE O IN WOMEN MAKES THE SHORT "I" SOUND  
& THE TI IN NATION IS PRONOUNCED "SH"  
THEN THE WORD

# "GHOTI"

IS PRONOUNCED JUST LIKE

# "FISH"

WELCOME TO THE ENGLISH LANGUAGE 🤖

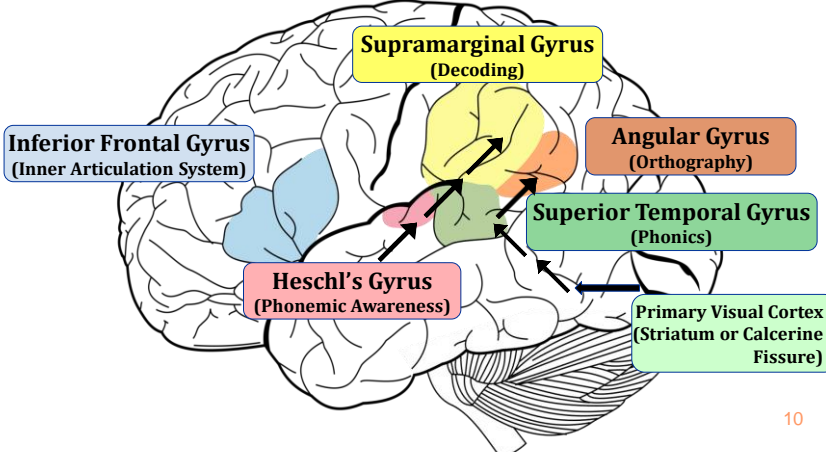

9

9

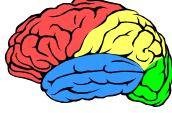

## The Reading Brain: How Words are Assembled

3. Specific neuroimaging techniques have demonstrated that **phonological** processing and **orthographic** processing are a by-product of the functional integrity of the *temporal-parietal junctures* in the left hemisphere of the brain (Pugh et al., 2000, McCandliss & Noble, 2003; Shaywitz, 2004; Sandak et al., 2004).

10

10

## Multiple Cueing System of Reading

➤ Recognizes that both **phonological** and **orthographic** and **semantic** cues can facilitate word recognition.

**Word Reading**

**Phonics**

**Ortho-  
graphy**

**Semantic**

- Phonemic Awareness
- Decoding
- Orthographic Perception
- Orthographic Memory
- Alphabetic Knowledge
- Vocabulary
- Executive Functioning

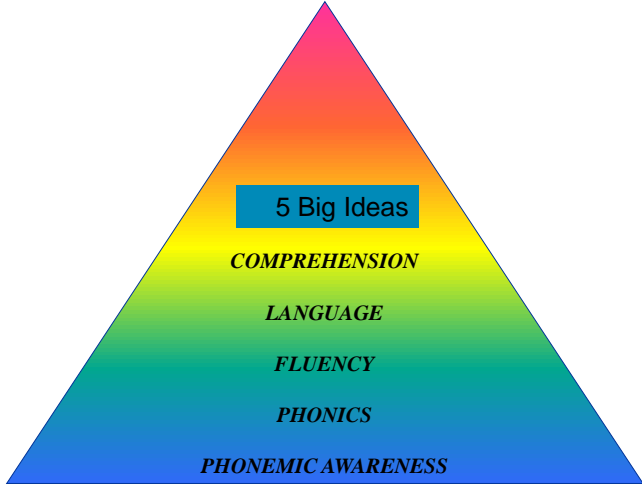

11

11

## Four Universal Truths of Reading

4. According to the National Reading Panel (2000), and modified by Grizzle et al. (2009), the **5** big ideas of the reading process include:

5 Big Ideas

COMPREHENSION

LANGUAGE

FLUENCY

PHONICS

PHONIC AWARENESS

12

12

## Four Subtypes of Reading Disorders

**(1) Dysphonetic Dyslexia** – difficulty sounding out words in a phonological manner.

**(2) Surface Dyslexia** – difficulty with the rapid and automatic recognition of words in print.

**(3) Mixed Dyslexia** – multiple reading deficits characterized by impaired phonological and orthographic processing skills. Most severe form of dyslexia.

**(4) Comprehension Deficits** – mechanical side of reading is fine but difficulty persists deriving meaning from print.

13

13

## Keys to Intervention

- The younger the child, the better the outcome.
- The “*at-risk*” child responds best to small group instruction **(3:1)**, with phonological awareness training being combined with **explicit phonics**.
- Older children respond better to “**top down**” instruction using morphological cues and multi-faceted literacy models.
- Frequency of instruction (4-5 days per week) was more effective than sporadic instruction.
- All schools should have **4 intervention programs**:
  1. **Traditional Structured Phonics** (Foundations, Language Foundations, etc.)
  2. **Non-traditional phonics** (Lips, Horizons, O-G, Wilson)
  3. **Fluency** (Read Naturally, Great Leaps, etc.)
  4. **Comprehension** (Soar to Success, Lindamood V&V)
- \* **Comprehensive Literacy Programs- Tier II** (Read 180, LLI, etc.)

14

Steven G. Feifer, D.Ed., ABSNP

- A neurodevelopmental assessment of reading
- Pre-K to College (Ages 4-21)
- Diagnoses 4 subtypes of reading disorders
- Includes the FAR-S dyslexia screening battery
- Traditional achievement tests tell **WHERE** a student is functioning, diagnostic achievement tests tell **WHY!**
- Puts the **“I”** back in **IEP’s!!!**

15

### Structure of the FAR

Index	Subtest	Grade range	Approximate administration time in minutes
<b>Phonological Index (PI)</b>	<b>Phonemic Awareness (PA)</b>	PK to college	5 to 10
	Nonsense Word Decoding (NWD)	Grade 2 to college	2
	Isolated Word Reading Fluency (ISO)	K to college	1
	Oral Reading Fluency (ORF)	K to college	2 to 3
	Positioning Sounds (PS)	PK to college	3 to 4
<b>Fluency Index (FI)</b>	<b>Rapid Automatic Naming (RAN)</b>	PK to college	2
	Verbal Fluency (VF)	PK to college	2
	Visual Perception (VP)	PK to college	1
	Orthographical Processing (OP)	K to college	8
	Irregular Word Reading Fluency (IRR)	Grade 2 to college	1
<b>Comprehension Index (CI)</b>	<b>Semantic Concepts (SC)</b>	PK to college	5 to 8
	Word Recall (WR)	PK to college	4
	Print Knowledge (PK)	PK to Grade 1	4
	Morphological Processing (MP)	Grade 2 to college	7
	Silent Reading Fluency (SRF)	Grade 2 to college	8

16

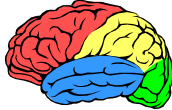

Fundations	FAR INTERPRETIVE REPORT WRITER: Targeted Reading Programs
Alphabetic Phonics	A multisensory phonological approach to reading that is an extension of the traditional Orton-Gillingham model. There are 11 fast-paced activities embedded within each lesson to develop automaticity with phonics skills.
Read Well	A top-down reading and language arts solution that emphasizes a mixture of instruction to the class as a whole, smaller groups, and individual student practice.
Lexia Primary Reading	A self-paced computer-based program that helps students develop reading skills. The program identifies when students would benefit from additional support, and automatically notifies the teacher with individualized feedback and recommendations.
Fast Forward Language to Reading	A scientifically-based 8-12 week reading intervention that boosts students' reading levels by one or two grades. Focuses on phonemic awareness, phonics, fluency, comprehension, and vocabulary.
Voyager Time Warp Plus	A summer reading intervention that encompasses 80 hours-worth of material. Phonemic awareness, phonics and word analysis, fluency, vocabulary, and comprehension are covered thoroughly through daily practice.
System 44	Teaches foundational reading skills to students Grades 3+. This computer-based platform encourages students to think critically and interact with the text as they learn phonics and comprehension.
Academy of Reading	An intervention program that helps students with phonemic awareness, phonics, fluency, vocabulary, and comprehension. This online program includes real-time reading assessments and progress monitoring.
Words Their Way	A developmental spelling, phonics, and vocabulary program with numerous activities geared toward developing orthographic knowledge. Sorting, constructing a word wall, and creating a word study notebook are essential components of the program.

17

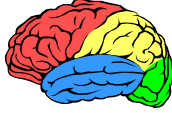

## Five Quick Facts About Written Expression

- 1. Most students rely on writing, either e-mail, text messages, word processing, or other computerized technology to communicate.**
- 2. According to NAEP, 54% of 8<sup>th</sup> graders and 52% of 12<sup>th</sup> graders perform at a *Basic* level in written expression.**
- 3. Males score *significantly* lower than females on standardized assessments of written language** (NAEP, 2011).
- 4. Downward extension of our curriculum whereby reading and written language skills being emphasized in kindergarten.**
- 5. Writing remains one of the most challenging skills to teach with in our students.**

18

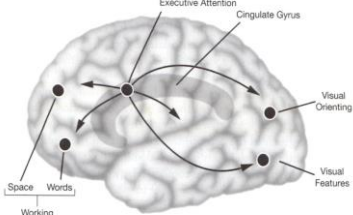

18

## Cognitive Constructs Involved with Written Language

### Attention

- ▶ Poor planning
- ▶ Uneven tempo
- ▶ Erratic legibility
- ▶ Inconsistent spelling
- ▶ Poor self monitoring
- ▶ Impersistence

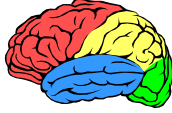

**BRAIN REGION - Anterior Cingulate Gyrus**  
*\*Effort control and top-down attention*

19

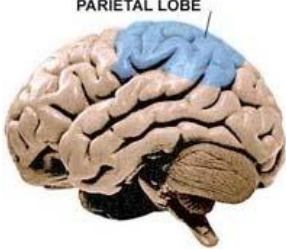

20

## Cognitive Constructs Involved with Written Language

### Spatial Production

- ▶ Poor spatial production
- ▶ Poor visualization
- ▶ Poor margination
- ▶ Organization problems
- ▶ Uneven spacing
- ▶ Poor use of lines

**BRAIN REGION - Right Parietal Lobe**

21

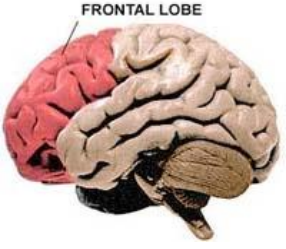

21

## Cognitive Constructs Involved with Written Language

### Sequential Production

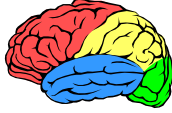

- ▶ Poor connected writing
- ▶ Letter reversals
- ▶ Organizational deficits
- ▶ Lack of cohesive ties
- ▶ Deficits in working memory, especially with ADHD kids, leads to poor sequential dysfunction.

**BRAIN REGION - Left Prefrontal Cortex**

22

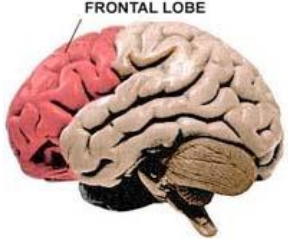

22

## Cognitive Constructs Involved with Written Language

### Working Memory Skills

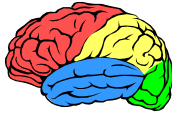

- ▶ Poor *word retrieval* skills
- ▶ Poor spelling
- ▶ Poor grammar rules
- ▶ Loss of train of thought
- ▶ Deterioration of continuous writing
- ▶ Poor elaboration of ideas
- ▶ Cortical mapping of language is *distributed* throughout brain (*i.e. nouns vs. verbs*)

**BRAIN REGION - Semantic memories stored in Temporal Lobes. Retrieved by Frontal Lobes**

23

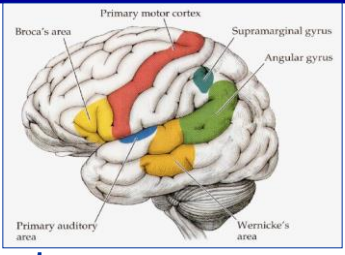

23

## Cognitive Constructs Involved with Written Language

### Language

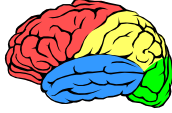

- ▶ Poor vocabulary
- ▶ Lack of cohesive ties
- ▶ Poor grammar
- ▶ Simplistic sentence structure
- ▶ Left hemisphere stores language by **converging** words into semantic baskets; right hemisphere excels in more **divergent** linguistic skills (simile and metaphor)

**BRAIN REGION - Left Temporal Lobe**

24

24

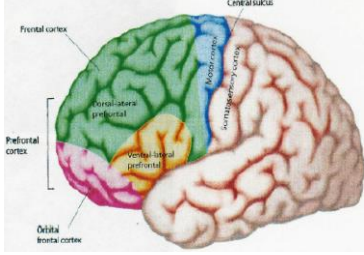

## Cognitive Constructs Involved with Written Language

---

### Executive Functioning

- Organize and plan ideas
- Self monitor
- Task initiation
- Sustain attention to task
- Verbal retrieval fluency
- Cognitive flexibility to shift from one topic to another.

**BRAIN REGION – Dorsolateral Prefrontal Cortex**

25

25

## Executive Functioning and Written Language

---

<u>Classification</u>	<u>Writing Dysfunction</u>
(1) Initiating	<ul style="list-style-type: none"> <li>* Poor idea generation</li> <li>* Poor independence</li> </ul>
(2) Sustaining	<ul style="list-style-type: none"> <li>* Lose track of thoughts</li> <li>* Difficulty finishing</li> <li>* Sentences disjointed</li> </ul>
(3) Inhibiting	<ul style="list-style-type: none"> <li>* Impulsive/Distractible</li> </ul>
(4) Shifting	<ul style="list-style-type: none"> <li>* Perseverations</li> <li>* “Stuck” on topic</li> </ul>

26

26

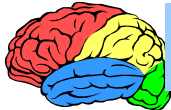

## Executive Functioning and Written Language

---

<u>Classification</u>	<u>Writing Dysfunction</u>
(5) Poor Organization	<ul style="list-style-type: none"> <li>* Frequent erasers</li> <li>* Forget main idea</li> <li>* Disjointed content</li> </ul>
(6) Poor Planning	<ul style="list-style-type: none"> <li>* Poor flow of ideas</li> <li>* Lack of cohesive ties</li> </ul>
(7) Poor Word Retrieval	<ul style="list-style-type: none"> <li>* Limited word choice</li> <li>* Simplistic sentences</li> </ul>
(8) Poor Self Monitor	<ul style="list-style-type: none"> <li>* Spelling miscues</li> <li>* Sloppy work</li> <li>* Careless errors</li> </ul>

27

27

## Cognitive Constructs Involved with Written Language

---

### Motor Output Speed

Grade Levels	Handwriting Speed
Grade 1	15 -32 letters per minute
Grade 2	20 -35 letters per minute
Grade 3	25 -47 letters per minute
Grade 4	34 -70 letters per minute
Grade 5	38 -83 letters per minute
Grade 6	46 -91 letters per minute

**BRAIN REGION – Basal Ganglia**

(Pollack et al., 2009)

28

28

### 3 Subtypes of Written Language Disorders

(1) **Graphomotor Dygraphias** - apraxia refers to a wide variety of motor skill deficits in which the voluntary execution of a skilled motor movement is impaired.

- a) **Premotor cortex** plans the execution of a motor response.
- b) **Supplementary motor area** - guides motor movement
- c) **Cerebellum** - provides proprioceptive feedback.
- d) **Basal Ganglia** - procedural memory and automaticity of handwriting.

29

29

### (2) Dyslexic Dysgraphias: Spelling Miscues

a) **Dysphonetic dysgraphia** - the hallmark feature of this disorder is an inability to spell by *sound* due to poor *phonological* skills. There is often an over-reliance on the visual features of words when spelling.

b) **Surface dysgraphia** - a breakdown in the *orthographic* representation of words. Miscues made primarily on phonologically irregular words.

c) **Mixed Dysgraphia** - characterized by a combination of both *phonological* errors and *orthographical* errors depicting faulty arrangement of letters and words.

30

30

### 3 Subtypes of Written Language Disorders

**(3) Executive Dysgraphias** - an inability to master the implicit rules for grammar which dictate how words and phrases can be combined. Deficits in **working memory** and **executive functioning** in frontal lobes hinders syntax!

- ▶ Word omissions
- ▶ Word ordering
- ▶ Incorrect verb usage
- ▶ Word ending errors
- ▶ Poor punctuation
- ▶ Lack of capitalization
- ▶ Oral vs. written language discrepancy

31

31

### Feifer Assessment of Writing (FAW) Spring, 2020

Examiner Record Form

feiferassessmentofwriting™  
Steven G. Feifer, DEd

Test date \_\_\_\_\_ ID number \_\_\_\_\_  
 Examiner's name \_\_\_\_\_ Site name \_\_\_\_\_  
 Student's \_\_\_\_\_  
 date of birth \_\_\_\_\_ Age \_\_\_\_\_ Grade \_\_\_\_\_ Gender \_\_\_\_\_

**Instructions for Examiners**

This booklet contains administration and scoring instructions for the student of the Feifer Assessment of Writing (FAW). Please read the instructions for each subtest carefully, and record all responses within this Record Form.

Before you begin testing, ensure that the demographic information requested above has been filled in and that you are sitting comfortably at a table with the student sitting across from you. For administration you will need the following materials: this Examiner Record Form, the Examiner Response Form, the Stimulus Book, the Sentence Scaffoldings Cards, three to five well-sharpened pencils, and a stopwatch. Additional administration and scoring information can be found in the Administration and Scoring Manual.

---

**Icon Legend**

 This subtest is timed.	 This subtest requires use of the Stimulus Book.	 This subtest has a specific grade range.
 This subtest requires use of the Examiner Response Form and a pencil. The examinee should not have paper or a pencil for any other subtests.	 This subtest requires use of the Examiner Response Form and a red pencil. The examinee should not have paper or a red pencil for any other subtests.	 This subtest uses sentence cards.

## EmPOWER – Dr. Bonnie Singer

---

**Students and Parents**

**School Administrators and Teachers**

**Architects For Learning®**  
BUILDING STRONG LEARNING FOUNDATIONS

Home Events Resources Blog Contact

**ABOUT US** SERVICES SUCCESS STORIES

**EmPOWER**

EmPOWER is a systematic method for teaching academic writing. With EmPOWER, students talk themselves through six steps of the writing process and, within each step, use proven strategies to problem-solve. The EmPOWER steps include:

<b>Evaluate:</b>	break down the task to determine what I have to do
<b>make a</b>	
<b>Plan:</b>	Identify my purpose for writing and select strategies
<b>Organize:</b>	show my thinking and organize my ideas
<b>Work:</b>	work my ideas into well-structured text
<b>Evaluate:</b>	assess my work
<b>Re-work:</b>	make necessary changes

Students can use the EmPOWER method for any writing assignment in any grade level and any subject area.

[Back to Our Methods](#)

© 2015 Architects For Learning

34

34

## Self Monitoring Strategies

**COPS strategy** – a directional proof-reading strategy where the student re-reads their passage four times prior to completion.

- 1) **Capitalize** the first word of each sentence.
- 2) **Organize** the information by reviewing topic sentences and double check paragraph breaks. separations.
- 3) **Punctuation** miscues must be reviewed.
- 4) **Spelling** miscues must be reviewed.

35

35

## What is a Math Disability?

- \*Dyscalculia** – children with specific math-related deficits, including :
- a) Learning and retrieving mathematical facts  
**(Language Retrieval)**
  - b) Executing math calculation procedures  
**(Working Memory)**
  - c) Basic number sense and concept development  
**(Executive Functioning)**
  - d) Visualizing magnitude representations.  
**(Visual-spatial Reasoning)**

**Math Learning Disability (MLD)** - a generic term referring to children whose math performance in the classroom is substantially below age- and grade-level expectations. Often used when there is unexpected underachievement.

\* Up to **20%** of school age children have MLD or persistent difficulty with math (Iuculano et al., 2015)

36

36

## The Neural Machinery of Mathematics

### Language Skills: (temporal lobes)

- Most Asian languages have linguistic counting systems past *ten* (*ten-one, ten-two, etc*) whereas English deviates from base-10 system (Campbell & Xue, 2001).
- In English counting system, decades come first then unit (*i.e. twenty-one*) or sometimes this is reversed (*i.e. fifteen, sixteen, etc...*)
- Chinese numbers are brief (*i.e. 4=si, 7=qi*) allowing for more efficient memory. By age four, Chinese students can count to 40, U.S. students to 15.
- U.S. kids spend **180** days in school  
South Korea children spend **220** days in school  
Japan kids spends **243** days in school

37

37

## The Neural Machinery of Mathematics

### Working Memory Skills: (Baddeley,1998)

- ***Phonological Loop*** - holds and manipulates acoustic information. Housed in *left temporal lobes*.
- ***Visual-Spatial Sketchpad*** - holds visual, spatial, and kinesthetic information in temporary storage by way of mental imagery. Housed along inferior portions of *right parietal lobes*. Extremely important in mathematics.
- ***Central Executive System*** - command post for controlling two slave systems. Allocates attention resources whereby two cognitive tasks can be executed. Primarily housed in *frontal lobes*.
  - Central executive system becomes very inefficient when a student feels anxiety and stress.

38

38

## Horizontal Vs. Vertical

(Trbovich & LeFevre, 2003).

- Solving problems in a vertical format required the use of more visual resources, particularly the visual-spatial sketchpad of working memory.
- Solving problems in a horizontal format required more phonological resources resulting in slower performance.

A	B
32 + 6	6 + 32
C	D
32 + 6	6 + 32

39

39

## Math Anxiety

### STRESS RESPONSE SYSTEM

**Cortisol** – a glucocorticoid (glucose-cortex-steroid) that regulates the metabolism of glucose in the brain. A balance or homeostasis of cortisol is needed for optimal brain functioning. Too much (*Cushing's Syndrome*)...too little (*Addison's Disease*).

- Stress & anxiety impacts body by lowering immune system, and also by reducing sleep.
- Stress and anxiety alters amygdala to PFC connections leading to impairments in executive functioning (Berens et al., 2017).
- Anxiety impacts cognition and learning by way of working memory (Dowker et al., 2015)

40

40

## The Truth About Math Anxiety: Do We Have a Math Phobia?

### **Implicit Messages:**

*"Oh not to worry Billy, I was never that good in math either."  
"Wow, are you taking Algebra II....that is sooooo hard!"  
"Hey Ritchie...it doesn't matter if you do not understand your  
math homework, you will never use this stuff in real life."*

### **CAUSES OF MATH ANXIETY:**

- Timed tests
- Pop quizzes
- Being called upon to write a math problem on the board
- Speeded skill drills and classroom competitions
- Teaching too quickly before concepts are consolidated
- Unit tests that cover too much information
- No visual cues
- Poor instruction
- Classroom climates that prevent students from asking questions
- Stressing teacher's own algorithm

41

41

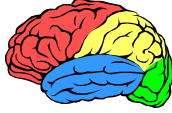

## The Neural Machinery of Mathematics

### **Executive Functioning Skills: (frontal lobes)**

- Executive control mechanisms are a set of directive processes such as planning, self-monitoring, organizing, and allocating attention resources to effectively execute a goal directed task.
- Executive functioning dictates "*what to do when*", a critical process in solving word problems.
- Executive functioning allows students to choose an appropriate algorithm when problem solving.

42

42

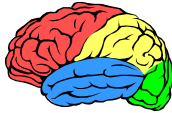

## The Neural Machinery of Mathematics

<u>EXECUTIVE DYSFUNCTION</u>	<u>BRAIN REGION</u>	<u>MATH SKILL</u>
<ul style="list-style-type: none"> <li>• <i>Selective Attention</i></li> </ul>	<ul style="list-style-type: none"> <li>• <i>Anterior Cingulate/ Subcortical structures</i></li> </ul>	<ul style="list-style-type: none"> <li>• <i>Poor attention to math operational signs</i></li> <li>• <i>Place value mis-aligned</i></li> </ul>

44

44

## 3 Subtypes of Math Disabilities

### (1) *Verbal Dyscalculia Subtype:*

Main deficit is the automatic retrieval of number facts which have been stored in a linguistic code.

- Over-reliance on manipulatives when problem solving.
- Multiplication and addition often impaired.
- Poor at math fluency tests.
- Math algorithms often preserved.
- Often have learning disabilities in language arts as well.

Key Constructs: Language & Verbal Retrieval Skills

45

## 3 Subtypes of Math Disabilities

### (2) *Procedural Dyscalculia Subtype:*

- A deficit in the ability to count, order, or sequence numbers.
- Difficulty recalling the algorithm or sequence of steps when performing longer math operations.
- Confusion with long division and place value.
- Retrieval of math facts such as single digit addition, subtraction, and multiplication, as well as magnitude comparisons often preserved.
- Only partial development of “*number sense*”

Key Constructs: Working Memory and Anxiety

46

## 3 Subtypes of Math Disabilities

### **(3) Semantic Subtype (Visual-Spatial)**

- A deficit with **non-symbolic** representations of math including estimation skills, aligning numbers in columns, magnitude representations, and pattern recognition skills among objects (**right hemisphere**).
- In the **left hemisphere**, impacts visual inferencing of verbal information. This may impact applying visual strategies to verbally mediated problems. For example,

*"A laboratory used 120 fence posts in an experiment comparing two types of paint. Six fewer than twice as many fence posts were painted with paint A as were painted with paint B. How many fence posts were painted with paint A? Paint B?"*

Key Constructs: Visual-Spatial processing

Index	Subtest	Grade range	Approximate administration time
<b>Procedural Index (PI)</b>	Forward Number Count (FNC)	PK to college	5 minutes
	Backward Number Count (BNC)	K to college	5 minutes
	Numeric Capacity (NCA)	PK to college	3 minutes
	Sequences (SEQ)	PK to college	5 minutes
	Object Counting (OC)	PK to Grade 2	5 minutes
<b>Verbal Index (VI)</b>	Rapid Number Naming (RNN)	PK to college	1 minute
	Addition Fluency (AF)	K to college	1 minute
	Subtraction Fluency (SF)	K to college	1 minute
	Multiplication Fluency (MF)	Grade 3 to college	1 minute
	Division Fluency (DF)	Grade 3 to college	1 minute
	Linguistic Math Concepts (LMC)	PK to college	6 minutes
<b>Semantic Index (SI)</b>	Spatial Memory (SM)	PK to college	5 minutes
	Equation Building (EB)	Grade 3 to college	4 to 6 minutes
	Perceptual Estimation (PE)	PK to college	5 minutes
	Number Comparison (NCO)	PK to college	2 minutes
	Addition Knowledge (AK)	K to college	2 minutes
	Subtraction Knowledge (SK)	K to college	2 minutes
	Multiplication Knowledge (MK)	Grade 3 to college	2 minutes
	Division Knowledge (DK)	Grade 3 to college	2 minutes

## Evidenced Based Math Programs

1. **Lindamood Bell "On Cloud Nine"** – helps children visualize number concepts and develop math reasoning skills.
2. **Fraction Face-Off** – a game where students are in teams to earn fraction money by understanding part-whole interpretations.
3. **Number Worlds** – intended for 1<sup>st</sup> -8<sup>th</sup> grades to supplement daily math instruction. Students take placement test. Recommended 45-60 min/day.
4. **Dreambox Learning** – grades K-6 online learning program that focuses on numbers, place value, and developing number sense.
5. **EnVision Math** - Aligned with common core for students K-6. Includes daily assessments (Pearson).
6. **I Can Learn Algebra** - designed for more inner city and students in grades 6-12. Computer based and consists of 130 lessons and 45 hours of instructional video.

## FAM Interpretive Report Writer

- ▶ Teach students to think in “*pictures*” as well as “*words*”.
- ▶ Adopt a curriculum such as “*Math Investigations*” which allows students to select their own algorithm.
- ▶ Attach number-line (vertical) to desk and provide as many manipulatives as possible when problem solving.
- ▶ Teach skip-counting to learn multiplication facts.
- ▶ Teach base-10 counting strategies.
- ▶ Teach estimation skills to reinforce magnitude representations.
- ▶ Have students write a math sentence from a verbal sentence.
- ▶ Develop a FNWS and BNWS to *ten, twenty, and thirty* without counting back.
- ▶ Construct incorrect answers to equations and have students discriminate correct vs. incorrect responses.
- ▶ Reinforce the language of math by re-teaching quantitative words such as *more, less, equal, sum, altogether, difference, etc...*
